RESEARCH EXPERIENCE

MPhil Student, The Chinese University of Hong Kong, Hong Kong Aug. 2019 – Present
Routing Tree Construction [ASP-DAC'21, Best Paper Award]

- Formalized special properties of the point cloud for the routing tree construction with theoretical proof.
- Proposed an adaptive flow, which used the cloud embedding obtained by a specifically-designed model based on special properties, to select the best approach and predict the best parameter;
- Outperformed previous methods by a large margin yet being extensible and flexible.

Adaptive Layout Decomposition [DAC'20]

- Proposed an adaptive workflow for efficient decomposer selection and graph matching using graph embeddings.
- Designed a graph library construction algorithm based on graph embeddings for small graphs excluding isomorphic ones.
- Reduced the runtime by 87.7% while still preserving the optimality compared with the ILP-based decomposer.

Reviewed paper for ICCV'21

Research Assistant, The Chinese University of Hong Kong, Hong Kong Feb. 2019 – July. 2019
Open-source Layout Decomposition Framework [TCAD'21]

- Presented an open-source layout decomposition framework, with efficient implementations of various state-of-the-art simplification and decomposition algorithms.
- Discovered a set of issues of previous algorithms and proposed corresponding solutions.

Acceleration and Compression of DNNs [ICTAI'19, Best Student Paper Award]

- Proposed a unified framework to compress CNNs by combining both lowrankness and sparsity.
- Compressed the model with up to $4.9\times$ reduction of parameters at a cost of little loss.

Research Assistant, Southern University of Science and Technology, China June. 2018 – Jan. 2019
Testing of Auto-driving Systems [ICSE'20]

- Introduced a joint optimization method to systematically generate adversarial perturbations to mislead steering of an autonomous driving system physically.
- Demonstrated the possibility of continuous physical-world tests for auto-driving scenarios as the first study.

Fault Localization [ISSTA'19, Distinguished Paper Award]

- Proposed a hierarchical DL approach to automatically learn the most effective features for precise fault localization.
- Significantly outperformed state-of-the-art with over 20% improvement.
